Bridget Crampton

(206) 308-3487 | crampton.b@northeastern.edu | Boston, MA | github.com/crbridget | linkedin.com/in/bridget-crampton

Education

Northeastern University, Khoury College of Computer Sciences — Boston, MA
Candidate for Bachelor of Science in Data Science; GPA: 3.69 — *May 2028*

- Relevant Coursework: Algorithms, Machine Learning, Statistics, Data Science, Advanced Programming with Data, Linear Algebra, Calculus, Probability Theory, Database Systems, Data Visualization, Financial Accounting and Reporting

Experience

Business Intelligence Co-op — *Jul 2026 – Present*
Klaviyo — *Boston, MA*

- Built and deployed a deal-scoring system that rates **370+ deals/month** from Salesforce data, saving Deal Desk ∼**10 hours/week** of manual review; presented at the team's Q3 review
- Replaced ∼**8 hours/week** of manual chart updates with a Workato-orchestrated ETL pipeline (Python, AWS S3, dbt) tracking 9 competitors' pricing every 30 minutes, with Streamlit dashboards and Slack price alerts
- Developing an LLM extraction workflow (OpenAI API, Snowflake) that turns **50+** competitor quote PDFs into validated, source-traceable pricing data, saving **15–30 minutes** of manual entry per quote
- Designed a Snowflake data model comparing NRR, new ARR, and cross-sell by ecommerce platform for Partnerships, showing the growth gap on three partner platforms was retention and expansion rather than acquisition

Data Engineer — *Aug 2026 – Present*
Remetra, Generate Product Development Studio — *Boston, MA*

- Developing the Python/FastAPI and PostgreSQL backend for Remetra, a mobile app built for an external client that helps people with autoimmune disease symptoms identify food triggers, alongside 5 engineers and 2 tech leads
- Engineered the app's **LLM** chatbot backend with the Gemini API, letting users ask about their own food and symptom data, with guardrails against medical advice and unsupported trigger claims
- Created the data pipeline for a **Bayesian** trigger model, mapping logged ingredients to food components and generating synthetic users with planted triggers to test whether the model finds them

Data Analyst Intern — *Mar 2026 – Jun 2026*
IDX Exchange — *Remote*

- Built two Python/pandas pipelines that cleaned **1.44M** raw California MLS records from 54 monthly exports into **889K+** analysis-ready residential records, enriched with FRED mortgage rates
- Designed outlier rules with 99th-percentile caps in place of a standard 1.5×IQR fence, keeping luxury sales above $2.39M and shifting the median close price by only **$4K**
- Created 6 interactive Tableau dashboards ranking the top 100 agents and brokerages, with zip code heat maps by geography and property type; presented findings to the CEO in a market intelligence report

Projects

Internship Tracker | *Python, Flask, React, PostgreSQL, Sentence Transformers* — *Aug 2026 – Present*

- Built a pipeline that polls **65** companies' Greenhouse and Lever job boards every 30 minutes via GitHub Actions, tracking **22K+** postings through their open and closed states with deduplicating PostgreSQL upserts
- Ranked postings against each user's target roles with **sentence-transformer** embeddings and cosine similarity, matching related titles that keyword search misses
- Deployed a Flask API and React/TypeScript app with Clerk auth, a 5-stage application tracker, and **156** pytest tests

ML Credit Card Fraud Detection | *Python, pandas, Scikit-Learn, XGBoost, TensorFlow* — *Spring 2026*

- Compared 7 classification models on **590K+** card transactions (3.5% fraud) using a time-based split to prevent leakage; XGBoost reached 0.913 validation AUC vs. a 0.832 logistic regression baseline
- Cut false alarms ∼**70%** compared to the baseline (28.5K to 8.5K legitimate transactions flagged) while catching **72%** of fraud
- Feature engineering: engineered 15 fraud features, including per-card amount z-scores and fraud rates by address, and built a pandas pipeline to impute missing values across **418** columns

Leadership & Campus Involvement

Teaching Assistant — *Spring 2026*
Khoury College of Computer Sciences, Northeastern University — *Boston, MA*

- Taught the linear algebra behind ML (linear systems, eigendecomposition, SVD) to **100+** students in DS 3000: Mathematical Foundations of AI through weekly office hours and in-class Q&A; graded weekly homeworks and 3 exams

Founder, Co-President of Outreach — *Spring 2025*
Girls Who Code Chapter, Northeastern University — *London, UK*

- Grew chapter from 4 to **50+** members in one semester and handed it off to new leadership; ran ML and coding workshops, study sessions, and a women in tech speaker series for **90+** attendees

Technical Skills

Languages & Frameworks: Python, SQL, TypeScript, React, FastAPI, Flask
ML & Data Science: Scikit-Learn, XGBoost, TensorFlow, NLP, LLM APIs, Feature Engineering, pandas, NumPy
Data & Tools: PostgreSQL, Snowflake, dbt, ETL, AWS S3, Docker, Git, Tableau, Streamlit, Matplotlib
